

"With Claims Advantage™, we streamlined our operations and saved the equivalent of several FTEs. The software is extremely user-friendly and has powerful billing capabilities and financial reporting. Claims Advantage has enabled us to grow much faster with little associated cost. They are truly the experts in web-based claims software."

~ Karen Agnich

Advocare, Ltd.

How is efficient are your claim operations?

Learn how we can help! We process claims for over 90,000 employers, MCO's and insurers nationwide

Companies just like yours are turning to our proven "software-as-a-service" technology model to mitigate the cost, risk and complexity of claims operations. Our web-based solution, called *Claims Advantage™*, offers continuous availability, security, compliance, and best-in-class functionality without the costly IT headaches of owning and maintaining your own system. Claims Advantage was built specifically for the web and has been maintained and hosted by MCO Advantage for over 10 years...we have the experience in software as a service that you will need to grow and rely on.

We do it all for you! The *Claims Advantage™* software is a secure web-based application and is accessed over the Internet. All parties are connected over the Web and remote access allows all documents to be viewed, routed, faxed, printed or emailed from any PC with an Internet connection. There is no hardware or software to install, maintain or upgrade and all system user training, administration and maintenance is done by us.

Enjoy immediate compliance and never have to worry about state and federal regulations. And with our integrated PPO's for bill-repricing, there is no need to sign agreements with multiple PPO's. Everything will be simplified and streamlined, allowing you the freedom to focus on your core business.

Call us today at **(800) 341-5809** for an online demo and learn how we can help you streamline your claim operations. Seeing is believing!

Benefits of Claims Advantage™

- **Real-Time Connectivity** with employers, providers and system users at remote locations. Once information is entered, it can be viewed, routed faxed, emailed or printed by authorized personnel from any PC with an Internet connection.
- **Operational Freedom:** By outsourcing application management, the client can focus critical resources on their core business function.
- **Improved Performance:** We apply our vast experience to implement best IT practices for superior levels of availability, security, backup, disaster recovery and help desk
- **Financial Flexibility:** Our model reduces fixed costs and lowers overall expenditures for hardware, applications and management.
- **Reduced Risk:** With no capital expenditure on software, hardware and IT personnel, organizations can "test" a new technology with minimal impact to their existing environment and bottom line.
- **Secure:** Our web-based delivery model has by design, near faultless, built-in system security. Data is transferred to and from our servers using military grade, 256-bit encryption and our proprietary browser software and Virtual Private Network (VPN) technology maintains the integrity and security of our clients' information. Designed to be hacker and virus resistant, using the AS/400 will dramatically reduce the potential for costly security breaches.
- **Dependable:** Our system operates on the IBM AS/400 and we back up all data on mirrored IBM servers to insure complete disaster recovery. Our web-based software availability means no business interruption or emergencies to leave you inoperable.
